

'The patient voice' - questions from the panel

- *how do we reach hidden patient groups to hear their voices?*
- *how can physiotherapists make use of limited consultation time to sufficiently hear what the person with pain has to say?*
- *what does rehabilitation mean? – does the meaning change depending on perspective? What is you're the client? or the therapist?*
- *what can the use of the 'patient's voice' add to the profession?*
